

CIDECOR

PACKER BIOCIDES/CORROSION INHIBITOR

DESCRIPTION

CIDE-COR is a combined liquid biocide and corrosion inhibitor for most water-base systems. It is water soluble, oil dispersible.

APPLICATION

CIDE-COR exhibits extended biocidal action and corrosion protection in workover and packer fluids. It will prevent the biodegradation of any polymer system. It is designed for use in sodium chloride and calcium chloride brines at the levels associated with normal drilling additives. If higher concentration brines, or brines using calcium bromide are to be used.

RECOMMENDED TREATMENT

A concentration of 0.5 to 1.0% of CIDE-COR per volume of fluid will effectively control bacteria and corrosion and should be added to all workover, completion and packer fluids.

MIXING PROCEDURE

CIDE-COR easily mixes in any water base system.

PACKAGING

CIDE-COR is packaged in 5 gal plastic pails or in 55 gal drums.

CIDE-COR is a Messina trademark and is in the KLEEN-OVER/KLEEN-COMPLETE family of non-damaging workover and completion fluid systems.
