

MUDUP-PLUS

HIGH-PURITY POLYMER VISCOSIFIER

DESCRIPTION

MUDUP-PLUS is a highly modified polysaccharide with excellent viscosifying properties. The product is a freeflowing, off-white powder.

APPLICATION

MUDUP-PLUS is an excellent lump-free viscosifier for most types of water-based drilling fluids. Its primary application is quick viscosities for top hole drilling and sweeps.

MUDUP-PLUS also acts as a secondary fluid loss agent, exhibits good shale inhibition, and provides lubricity to virtually all water-base systems. MUDUP-PLUS has no negative effects on water based mud components.

RECOMMENDED TREATMENT

Concentrations of 2 ppb (6 kg/m^3) to 4 ppb (12 kg/m^3) will meet all conceivable primary applications while producing yield points of 20 to 180 lb/100 square ft.

Further technical data and field application results are available upon request from Messina.

PACKAGING

MUDUP-PLUS is packaged in 25 kg net export bags.

MUDUP-PLUS is a Messina trademark
