

OIL AID-FL-65

LIQUID FLUID LOSS ADDITIVE

DESCRIPTION

OIL AID-FL-65 is a liquid hydrocarbon-based fluid loss agent for use with aqueous-based fracturing fluids. OIL AID-FL-65 is ten times more effective at reducing fluid loss than diesel.

APPLICATION

OIL AID-FL-65 is used to replace the 5% diesel that is often used for fluid loss control in fracturing fluids. A greatly reduced amount of OIL AID-FL-65 offers equivalent fluid loss control to diesel.

RECOMMENDED TREATMENT

OIL AID-FL-65 is normally recommended at a concentration of one half percent by volume of treatment fluid. As with all fluids, pilot testing should be conducted to insure compatibility of all fluid components and performance at anticipated downhole conditions.

PACKAGING

OIL AID-FL-65 is available in 55 gallon drums.

SAFETY

OIL AID-FL-65 is a hydrocarbon based fluid, and eye and skin irritation can result from contact. Goggles and gloves are recommended for handling. OIL AID-FL-65 should be protected from sources of ignition such as open flame, spark, or high temperatures.

OIL AID-FL-65 is a Messina trademark
